LVL1 WELCOMES **BEN NUTTALL** OF THE  
**RASPBERRY PI FOUNDATION**  
14 AUG 2014 · 7PM · 1205 E. WASHINGTON ST.

The Raspberry Pi is a \$35 credit-card sized computer that plugs into your TV and a keyboard. It is a capable little computer which can be used in electronics projects, and for many of the things that your desktop PC does, like spreadsheets, word-processing and games. It also plays high-definition video. The Raspberry Pi Foundation wants to see it being used by kids all over the world to learn how computers work, how to manipulate the electronic world around them, and how to program.

Ben is a programmer and educator currently touring both elementary schools and hackerspaces in the United States to check out how folks are using the Pi as well as to share and discuss what is possible. Join us at LVL1 Hackerspace for Ben's talk followed by Q&A, and some show and tell.
