

beyond arduino WORKSHOP

Are you limited by the arduino? Do you want to use your micro-controller to its full potential? This **\$50** class extends your knowledge of DIY electronics, teaching you how to interface a microcontroller with the world. Learn how to program in pure C code, use and extend the built-in libraries, and burn code onto this bare-bones system. Breadboards, Micro-controllers and Programmers are provided. Bring a laptop and your brain. Seating is **limited**, register online. All proceeds go towards funding the LVL1 hackerspace initiative. **This workshop is not for those without prior electronics experience.**

814 East Broadway
saturday
AUG 21st
1pm - 5pm
